Lior Handlarsky

SOC Analyst | Blue Team

liorhandlarsky1412@gmail.com • +972-58-550-1107 • linkedin.com/in/lior-handlarsky • github.com/Aperies0

PROFESSIONAL SUMMARY

Aspiring SOC Analyst with hands-on training through TryHackMe's SOC Level 1 path (completed), covering log analysis, SIEM and EDR workflows, threat detection, and incident response built on solid TCP/IP, DNS, and HTTP/HTTPS network fundamentals. Conducted an independent real-world phishing and account-takeover investigation using traffic interception and OSINT — identifying the true credential-theft mechanism, extracting IOCs, and delivering a full incident report with attack timeline and remediation recommendations. Offensive-security training (network enumeration, vulnerability assessment, privilege escalation, Active Directory attacks, custom tooling) gives attacker-perspective insight that sharpens detection, triage, and alert investigation. Former Apache Squadron Armament Crew Chief (Israeli Air Force), bringing discipline, procedure-driven rigor, and strong communication to high-pressure, shift-based monitoring environments.

TECHNICAL SKILLS

- **SOC / Blue Team:** Log analysis, alert triage & incident response, SIEM & EDR workflows (TryHackMe lab simulations), threat detection, IOC identification & extraction, phishing & malicious-domain analysis, threat intelligence, MITRE ATT&CK, incident reporting
- **Network Fundamentals:** TCP/IP, DNS, HTTP/HTTPS, traffic analysis & packet inspection
- **Security & Analysis Tools:** Wireshark, Burp Suite, Nmap, SIEM / EDR / SOAR / DLP concepts, Metasploit, BloodHound, Hashcat, John the Ripper
- **Programming & Scripting:** Python, Bash, PowerShell, JavaScript, API integrations, automation
- **Operating Systems:** Windows Server, Windows 10/11, Linux (Kali / Debian)
- **Security Concepts:** Incident response lifecycle, network security, Active Directory, Kerberos attacks, network enumeration, vulnerability assessment, privilege escalation, OSINT, web application security
- **Languages:** Hebrew (Native), English (Fluent)

FEATURED INVESTIGATION

Real-World Phishing & Account-Takeover Investigation — Independent Research 2026

- Investigated a live phishing and account-takeover attack end to end; full incident report published on GitHub.
- Used Burp Suite to intercept live traffic, identifying the true compromise mechanism — a Steam QR-login relay (session hijack) plus a parallel live credential-relay attack — rather than the decoy vector initially suspected.
- Performed OSINT on attacker infrastructure: WHOIS/domain analysis, mule-account identification, and anti-analysis/cloaking behavior (wildcard TLS, IP-based cloaking).
- Extracted IOCs (malicious domains, endpoints, accounts, tokens), reconstructed a full attack timeline, and delivered actionable remediation — demonstrating the complete SOC workflow under real conditions.

PROJECTS & PORTFOLIO

- **lfi2rce (new):** lfi2rce — Python CLI tool automating the LFI→RCE attack chain (detect, source-read with credential extraction, log-poison to interactive shell). Features auto-detection of vulnerable parameters and app quirks. Tested against real boxes (DVWA, TryHackMe Dogcat). github.com/Aperies0
- **ctf::enum v6:** CTF Enum Companion v6 — findings-driven browser-based recon tool. Mark what your scan reveals, service-specific tabs and checklists appear. Sticky loot tracker, localStorage persistence.
- **Nmapforge:** Visual Nmap command builder with preset scans, custom flag selection, and Searchsploit integration.
- **Lab Writeups:** Blue (EternalBlue/MS17-010), VulnNet: Roasted (AS-REP Roasting, Kerberoasting, DCSync), Attacktive Directory, Team (LFI, command injection, privesc), Support (IDOR, cookie-forge, LFI, command injection), Dogcat (LFI→RCE, log poisoning, Docker).

EDUCATION & TRAINING

Cybersecurity Course — ECOM College 2025 – 2026

- Offensive and defensive security with hands-on labs: log analysis, network enumeration, vulnerability assessment, privilege escalation, and Active Directory attacks.

TryHackMe — SOC Level 1 Path — Completed 2025

- Blue-team training: log analysis, SIEM concepts, EDR simulations, phishing analysis, threat intelligence, digital forensics basics, and incident-response workflow.

Kiryat Sharet High School, Holon — Full Israeli Bagrut Certificate 2022

PROFESSIONAL EXPERIENCE

Salesperson — Bug Multisystem 2025

- Identified customer needs and recommended tailored technology solutions, consistently meeting sales targets.
- Developed negotiation, objection-handling, and problem-solving skills in a fast-paced environment.

Armament Crew Chief — Apache Squadron, Israeli Air Force 2022 – 2025

- Maintained operational readiness of weapon systems on AH-64 Apache helicopters in a high-stakes, procedure-driven environment directly analogous to SOC monitoring discipline.
- Conducted inspections, troubleshooting, and mission preparation under pressure; demonstrated discipline, technical aptitude, leadership, and accountability.
