SUMMARY

Entry-level SOC analyst with hands-on Splunk and Elastic investigation experience (TryHackMe SOC Level 1), a self-built Wazuh + Active Directory SOC lab, and a completed 10-month cybersecurity program at ECOM College. Independently investigated a live phishing and account-takeover attack end to end: identified the real compromise vector, extracted IOCs and published a full incident report. Former IAF Apache armament crew chief with three years of shift work, including frequent night shifts, under strict checklist-driven procedures.

TECHNICAL SKILLS

- **SIEM & Triage:** Splunk (SPL), Elastic Stack / Kibana (KQL), Wazuh (custom rules), alert triage, classification & escalation, log correlation, incident timelines, SOAR
- **Endpoint & Host:** EDR, Windows Event Logs and Linux logs for attack detection, malware triage, living-off-the-land (LOTL) detection
- **Network & Web:** Wireshark, Snort (IDS), TCP/IP, DNS, HTTP/S; detecting MITM, network discovery, data exfiltration and web attacks
- **Threat Intel & Frameworks:** phishing email analysis, IOC extraction & enrichment, MITRE ATT&CK, Cyber Kill Chain, Pyramid of Pain
- **Attacker perspective:** Burp Suite, Nmap, Active Directory attack techniques (Kerberoasting, AS-REP roasting, DCSync), OSINT
- **Scripting & OS:** Python, Bash, PowerShell; Windows Server/10/11, Linux (Kali, Debian)
- **Languages:** Hebrew (native), English (fluent)

EXPERIENCE

Armament Crew Chief — Apache Squadron, Israeli Air Force 2022 – 2025

- Maintained, inspected and troubleshot AH-64 Apache weapon systems under strict, checklist-driven procedures with zero tolerance for error; accountable for crew tasks under time pressure.
- Worked rotating shifts, including frequent night shifts, keeping aircraft mission-ready around the clock.

Salesperson — Bug Multisystem 2025

- Explained technology products to non-technical customers; consistently met sales targets.

FEATURED INVESTIGATION

Real-World Phishing & Account-Takeover Investigation (full report) 2026

- Intercepted live traffic with Burp Suite and identified the true mechanism (a Steam QR-login relay session hijack plus a parallel credential-relay attack) rather than the decoy vector initially suspected.
- OSINT on attacker infrastructure: WHOIS/domain analysis, mule accounts, anti-analysis cloaking (wildcard TLS, IP-based).
- Extracted IOCs, reconstructed the attack timeline and delivered remediation recommendations.

PROJECTS

Home SOC Lab: Attack Simulation & Detection Engineering (writeup) 2026

- Deployed a Wazuh SIEM (Ubuntu Server) monitoring an Active Directory domain (Windows Server 2019 DC + Windows 10 workstation) via Wazuh agents and Sysmon.
- Built a logging GPO: command-line process auditing (4688), PowerShell script block logging, Kerberos / DS auditing.
- Simulated 4 ATT&CK techniques (encoded PowerShell, certutil LOLBin, Run-key persistence, password spraying) and wrote 5 custom Wazuh rules closing gaps in the default ruleset, debugging rule precedence, log-source and escaping issues.

Capstone Penetration Test — ECOM College 2026

- Solo, authorized web engagement from recon to exploitation; full professional report with findings, risk ratings and remediation (publication pending approval).

Offensive Tooling & Lab Writeups

- lfi2rce (Python CLI automating the LFI→RCE chain), Nmapforge (visual Nmap command builder), CTF Enum Companion (findings-driven recon tool).
- Writeups: Blue, VulnNet: Roasted, Attacktive Directory, Team, Support.

EDUCATION & TRAINING

Cybersecurity Program (10 months) — ECOM College Completed 2026

SOC Level 1 Path — TryHackMe Completed 2025

- SIEM triage (Splunk, Elastic), EDR & SOAR, phishing analysis, network / Windows / Linux monitoring, malware concepts.

Full Israeli Bagrut Certificate — Kiryat Sharet High School, Holon 2022
